

Pikcars is a hybrid startup aimed at tokenizing the ridesharing industry through our blockchain based payment solution called Pikpay. Pikcars combine ridesharing, blockchain payment solution and a location based social network to build a mobile app for riders and drivers. PIKCARS is registered in Nigeria and backed by a very experienced team with vast blockchain and business experience.

THE MAJOR FEATURES

Pikcars: This is a peer2peer ridesharing service of our platform. Pikcars combine Mapping/Geo-location function, driving direction solution, google map (mapping software) and a notification system (email, sms, and push notification) to provide an easy peer2peer ridesharing mobile app to connect riders and drivers. Riders can also chat and call drivers directly from their pikcars mobile app when merged for a ride.

Pikpay: Pikpay is an ethereum based payment solution integrated on the pikcars ridesharing mobile app to facilitate seamless, faster, cheaper and secured transactions and payments settlement between riders and drivers.

Pikconnect: Pikconnect is a location based social network built on the Pikcars ridesharing mobile app which enable user connect and chat with other users within their location. Pikconnect is designed to create a social community within the pikcars ecosystem to enhance users' experience.

PIK TOKEN

Pik token is the native currency of our ecosystem. An ethereum based token built to power transactions on the Pikcars ecosystem through Pikpay our blockchain payment solution. Pik token has a total supply of 20B.
